

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. EDITOR'S PREFACE.

THIS Catalogue of the Glass Weights with Arabic inscriptions in the British Museum forms a supplementary volume to the Catalogue of Oriental Coins, with which it is essentially connected, inasmuch as the majority of the glass weights were clearly used to test the accuracy of the weight of coins.

Arabic Glass Weights are preserved separately in the Department of Coins and Medals, and in that of Mediæval Antiquities ; but the contents of both departments have been included in this volume, with distinguishing letters.

The diameter and weight of each specimen (except when broken) are given in English inches and grains. Tables for converting inches into millimètres and the measures of Mionnet's scale, and grains into grammes, are supplied at the end of the volume.

The Catalogue is illustrated by nine autotype photographic plates.

The author is Mr. Stanley Lane-Poole ; and I have carefully compared each weight with the corresponding description.

REGINALD STUART POOLE.

295386

AUTHOR'S INTRODUCTION.

MANY of the coin cabinets of Europe contain a few glass discs, closely resembling Arabic coins in size, weight, and inscriptions. This resemblance has induced most numismatists to classify them as glass coins, *nummi vitrei*, *monnaies de verre*; and in my earliest contribution to the *Numismatic Chronicle* (xii. p. 199 ff., 1872) I endeavoured to support this view by various arguments derived from examples preserved in the British Museum. These arguments, however, were successfully combated by the late E. T. Rogers (*Num. Chron. N. S.*, xiii. p. 60, ff., 1873, and *Journal R. Asiatic Society, N. S.*, x. p. 98, ff., 1878); and a further study of the glass discs themselves, as well as of the historical evidence, leads to the inevitable conclusion that they are nothing else but *standard weights* issued by the government of the day for the purpose, mainly, of testing the accuracy of current coins, but also occasionally destined for other uses.

The most distinct statement on this subject hitherto discovered in a trustworthy Arabic authority is that of El-Mukaddesee, who, writing in A.D. 985, remarks in his *Maghrīb* (i. 240), that the coins in use in the dominions of the Fátımees are the deenár, and its fourth; the dirhem, half, quarter, eighth and sixteenth (*kharroobeh* or *kharnoobeh*) of the dirhem; all of which are accepted by number (not by weight); and he adds, "the weights for money are made of glass, and bear the same stamp as the ordinary *raṭl* [pound], namely the style of the [Fátımees] Prince of the Faithful."* This state-

* Prof. de Goeje, *Academy*, 26 Feb. 1876.

ment is sufficient to lay to rest any doubts as to the uses to which glass discs were put in Fátimée times ; and it is corroborated by a passage in Ed-Demeeree's *Hayyát el-Heywán* (i. 80), where it is related how, when 'Abd-el-Melik, the Amawee Khaleefeh, inaugurated his purely Mohammadan coinage, he was advised, in order to secure uniformity in weight, to "cast weights of glass, which cannot alter either by increase or by decrease." These appear to be the only references to glass standard weights for testing coins hitherto noticed in the works of Arabic writers. Ibn-el-Atheer, indeed, mentions weights for testing coins (*Kámil*, iv. 337), but does not state of what material they were made.

The evidence of the weights themselves points unmistakably to their relation to coins as standards of accuracy. Granting this special purpose, we should expect to find the glass discs tallying in weight with the various denominations of coins in circulation at the period to which they belong, and further to find their weight fairly uniform and constant for each denomination. This is precisely what we do find, as an examination of the following table of the glass weights in the British Museum collection will demonstrate :—

TABLE OF WEIGHTS OF GLASS.

(Numerals in thick type indicate that the denomination is specified on the glass weight; the rest are classified by analogy.)

I. Under the *Amawee* and *'Abbāsee Khaleefehs*, chiefly 2nd century A.H.

The foregoing table includes all the weights in the Museum series, with the exception of broken fragments, which possess no metrological value, and seven irregular weights. It is remarkable that in a series of about 320 glass weights for deenárs and dirhems and their subdivisions and multiples (the fels will be discussed later), only seven should depart notably from the uniform standard.* The remainder are singularly uniform, when it is remembered that it is not very easy to cast glass exactly to a grain in weight, or to modify the weight after it has hardened. The early weights bear the indication of the denomination of coin which they are intended to test; as *deenár*, *naṣf deenár*, *dirhem*, &c. The long series of Fátimée weights carry no such indication, but when classed according to the standard established by the earlier weights, they show almost equal uniformity and exactitude. Thus the deenár is seen to weigh 66 grs. Troy. In only one instance does it touch 67 grs., and only once falls to 58. Out of 37 specimens, 28 weigh 66 or 65 grs. The half-deenár weighs uniformly 33 grs.; the third, 22 grs.; the quarter, 15 or 16 grs.; and the double deenár, 131 or 132, only one falling to 126. Taking 66 as the standard weight of the deenár, the other denominations are seen to agree: the double ought to be, and is, 132; the half, 33; the third, 22; and the quarter, 16½ (the glass weight here falls slightly short).† Again, the dirhem, as shown by 90 examples in glass, weighs 45 to 46 grs. Two-thirds of the 90 exhibit one or other of these weights; of the

* These seven weigh 218, 118, 116, 29, 17, 8, and 6 grs. The last two may represent the *thumb* or ¼th of a deenár referred to by El-Muḳaddesee. The 17 may be an excessive ¼ deenár, the 29 a defective ¼ deenár, and so on.

† A unique glass weight published by Rogers is stated in its inscription to represent a "dirhem, two-thirds" (ثَلَاثِينَ) of a deenár; wt. 44 grs. (*e. infra*, p. xxvi.).

remaining 30, 12 attain to 47 grs., only one exceeds 47 grs., and four fall below 40 grs. The double dirhem ought to be 91 to 92 grs., and out of 64 Fátímee specimens 35 weigh 91 to 92 grs., and 51 range from 89 to 94 grs. (The eight 'Abbásee double-dirhems are less regular, but they average a minute fraction under 90 grs.) The half-dirhem should be $22\frac{1}{2}$ or 23 grs., and of 44 specimens, 32 weigh 22 to 23 grs., and only three fall below 20. The quarter-dirhem should weigh 11 or $11\frac{1}{2}$ grs., and with the exception of two of 10 grs. the 24 examples in the Museum all weigh from 11 to 12 grs. If we compare the weights recorded by Mr. Rogers in the articles referred to, we shall find that they tally very closely with those observed in the Museum collection. The accuracy of the glass discs as standard weights for deenárs and dirhems, as well as their doubles and subdivisions, may therefore be accepted as proved. That they correspond to the known weights of the deenárs and dirhems, &c., of their time is of course obvious to the numismatist.

The column headed *fels* demands careful consideration. The word *fels* does not necessarily imply a copper coin, though it was commonly used in this sense. It rather denotes any piece of money accepted *by weight*. It will be noticed that the *fels* is frequently stated in terms of so many *kharroobehs* or so many *keerátš*. According to the authorities cited by M. H. Sauvaire,* the *kharroobeh* seed weighs 3 grains of wheat, or 4 grains of barley; and 18 *kharroobehs* equal the dirhem in weight, and 24 the *mithkál* (i.e. deenár). The *keerátš* is equal to the *kharroobeh*, and runs 18 to the dirhem and 24 to the *mithkál*, or according to others the proportions are 14 and 20. Taking the 15 *fels* in the Museum which state their

* *Matériaux pour servir à l'histoire de la numismatique et de la métrologie musulmanes*, pt. i., p. 106, pt. ii., p. 53.

weight in kharroobehs or keeráts, and the solitary dirhem which gives its kharroobehs as 13, we arrive at the following conclusions:—

13 kharroobehs = 38 grs.		or 1 kharroobeh = (about) 3 grs.																		
15 " = 47 to 49 grs.	" " 1 " "	= 3 $\frac{1}{2}$ "																		
20 " = 63	" " 1 " "	= 3 $\frac{1}{2}$ "																		
30 " = 90	" " 1 " "	= 3 "																		
32 " = 97	" " 1 " "	= 3 "																		
33 " = 89	" " 1 " "	= 2 $\frac{2}{3}$ "																		
143 kharroobehs = 424	grs. " 1 " "	= 3 "																		
<table style="width: 100%; border-collapse: collapse;"> <tbody> <tr> <td style="width: 30%;">9 keeráts = 27 grs.</td> <td style="width: 30%;"></td> <td style="width: 30%;">or 1 keerát = 3 grs.</td> </tr> <tr> <td>14 " = 37</td> <td> " " 1 " "</td> <td>= 2$\frac{3}{4}$ "</td> </tr> <tr> <td>20 " = 56</td> <td> " " 1 " "</td> <td>= 2$\frac{3}{4}$ "</td> </tr> <tr> <td>25 " = 76</td> <td> " " 1 " "</td> <td>= 3 "</td> </tr> <tr> <td>30 " = 79</td> <td> " " 1 " "</td> <td>= 2$\frac{3}{4}$ "</td> </tr> <tr> <td style="border-top: 1px solid black;">98 " = 275</td> <td style="border-top: 1px solid black;"> " " 1 " "</td> <td style="border-top: 1px solid black;">= 2$\frac{7}{10}$ "</td> </tr> </tbody> </table>			9 keeráts = 27 grs.		or 1 keerát = 3 grs.	14 " = 37	" " 1 " "	= 2 $\frac{3}{4}$ "	20 " = 56	" " 1 " "	= 2 $\frac{3}{4}$ "	25 " = 76	" " 1 " "	= 3 "	30 " = 79	" " 1 " "	= 2 $\frac{3}{4}$ "	98 " = 275	" " 1 " "	= 2 $\frac{7}{10}$ "
9 keeráts = 27 grs.		or 1 keerát = 3 grs.																		
14 " = 37	" " 1 " "	= 2 $\frac{3}{4}$ "																		
20 " = 56	" " 1 " "	= 2 $\frac{3}{4}$ "																		
25 " = 76	" " 1 " "	= 3 "																		
30 " = 79	" " 1 " "	= 2 $\frac{3}{4}$ "																		
98 " = 275	" " 1 " "	= 2 $\frac{7}{10}$ "																		

From this it appears that the kharroobeh and the keerát are practically equivalent, and their value may be taken as 3 grs. in Egypt: but their weight and proportion to the deenár and dirhem varied in different countries.*

The question at once arises, what coins, if any, were these weights intended to test? One is avowedly a dirhem of 13 kharroobehs—thus forming an exception to the general estimate of 18 kharroobehs to the dirhem.† The rest are termed in their inscriptions *fels*, *great fels*, or *half fels*. The fels (according to these examples) weighs anything from 37 to 97 grs.: the "great fels" 90 grs., and the half fels 27 grs. It is obvious that the denomination counts for nothing, and that the number of kharroobehs or keeráts stated in the inscription is the real standard of weight. What then was to be tested with these glass

* Rogers published a fels of 33 kharroobehs, wt. 99; another of 30 kharroobehs, wt. 90, both of which exactly agree with the British Museum figures; and a fragment of 27 kharroobehs (Cf. below, p. xxviii.)

† Cp. l, p. xxvii., below. This estimate does not tally with the average weight of an unworn dirhem—about 46 grs.; 15 or 16 kharroobehs would be nearer the mark.

weights of so many *ķeeráts* or *kharroobehs*? Not *deenárs* or *dirhems*, since only two or three of these weights approximate the standards of *deenárs* and *dirhems*; moreover, these coins have standard glass weights of their own, specified as such. Again, testing an individual copper coin or *fels* by these standard weights would be useless, since the *fels* is very variable in weight, generally much worn and clipped, and sometimes intentionally cut into quarters. The *fels*, moreover, was usually passed by weight, not by number; and one is forced to the conclusion that these glass standards were used by the merchant to test the weight in copper of a certain number of *fuloos*, when offered for goods. This theory would account for the numerous varieties of weight employed, as indicated by the figures 9, 14, 15, 20, 25, 27, 30, 32, 33, *kharroobehs* or *ķeeráts*. The merchant is selling, let us suppose, a piece of cloth for two *dirhems* and a half, and the buyer has no half-*dirhem*, but tenders copper *fuloos* instead. These *fuloos* are of varying size and weight, but the proportion of copper in *kharroobehs* to the *dirhem* at the given time is of course known, and the merchant would proceed to weigh the required number of *fuloos* by his standard glass weight of so many *kharroobehs*.

Besides coin weights, the British Museum possesses a few heavier glass weights which represent the pound (*raṭl*) and ounce (*wuķeeyeh*), and were perhaps used for weighing a number of coins collectively. Some of these are inscribed with their denominations: such are the *raṭleyn* or 2 pounds, 5670 grs. (but the specimen is broken); the *raṭl* or pound, 3240 grs. (also broken); the half-*raṭl*, 1200 grs. (also broken); the quarter-*raṭl*, 1144 grs.; the half-*wuķeeyeh* or half ounce, 244 and 525 grs.; and the sixth of a *wuķeeyeh*, 96 grs. The uninscribed discs weigh 171, 115, 111 grs.; a hollow green glass cylinder, closed at both ends, weighs 4900 grs.; a glass ring (perhaps merely an ornament)

3000 grs.; and a square block, with a central hole, 1460 grs. One weight has what appears to be the numeral ۲ (2) upon it, weight, 120 grs.; another has the letter ح, wt. 147 grs.; and a third bears the representation of a figure, seated cross-legged, wearing a turban, and holding a bottle in his right hand and a wine-cup in his left. We learn from M. Sauvaire (ii. 93) that the Egyptian *raṭl* (for this weight varied greatly in different countries) weighed 6912 grs. of corn, or contained 12 oz. (*wuḳeeyeh*). At this rate, the sixth of a *wuḳeeyeh* weight of 96 grs. is exactly right; the half-ounce of 244 grs. wants 44 grs. to be full weight;* the other half-ounce of 525 grs. is inexplicable; the quarter of a pound, 1144 grs. is also very short of weight. The broken weights must of course be disregarded. Of the uninscribed weights, those of 4900, 3000, and 1460 grs., may represent the *raṭl roomee*, the Ḥalab ounce, and the double ounce of the *raṭl fulfulee*.

The scarcity of large glass weights may be accounted for by the brittle nature of the material; for a large piece of glass is more likely to be broken than a small one, if accidentally dropped. But the great preponderance of small glass weights is probably due chiefly to the fact that glass was specially reserved for testing the weight of coins, whilst copper and other materials could more easily be employed for the heavier weights required for weighing merchandise. It is singular, however, that so many weights of the Fāṭimee period should represent dirhems and their sub-divisions, whilst Fāṭimee dirhems are very rare in comparison with *deenárs*; and one is forced to the conclusion that the silver coinage of the Fāṭimee *Khaleefehs*, in spite of its scarceness in modern collections, must originally have been very numerous.

* M. Sauvaire has a half-ounce glass weight of 235 grs., *infra*, p. xxvii.

A cursory examination of the inscriptions on glass weights shows that they were specially and almost exclusively used in Egypt. Only two specimens bear the names of places; one of these is Miṣr, which means the capital of Egypt, and the other is El-Manṣooreeyeh, a Tunisian city under the rule of the Egyptian sovereign. Almost all the names of governors and princes found on the weights indicate an Egyptian origin. Of forty-three weights bearing the names of governors under the Khaleefehs of Damascus and Baghdád, thirty-four indicate holders of office (governors, treasurers, &c.) in Egypt, one has the word Miṣr, and it is fair to assume that the other eight names, though not hitherto identified, were those of Egyptian officials. Eighteen weights present the names of 'Abbásee Khaleefehs, without any indication of locality: but it is noteworthy that they all belong to times when Egypt was under the rule of governors or princes who acknowledged the supremacy of the 'Abbásee Khaleefehs. So long as their rivals the Fátímees held Egypt, not a single glass weight appears with an 'Abbásee name: but as soon as Ṣaláh-ed-deen had restored the allegiance of Egypt to the 'Abbásees, the names of the Khaleefehs El-Mustaḍee and En-Násir appear on the weights—a sufficient indication of their Egyptian origin. The great majority of glass weights bear the names of the Fátímee Khaleefehs: but none exhibits a Fátímee name or date prior to their conquest of Egypt. It may, therefore, be taken as proved that the use of glass weights as standards for testing coins was characteristic of Egypt, and, so far as can be proved, of Egypt alone. Had they been used elsewhere, the names of princes and governors, other than Egyptian, would surely have been found upon them. It may be added that the great majority of the glass weights in the British Museum were discovered in

Egypt, in the rubbish heaps round Cairo and Fustát and elsewhere, largely by the industry of the Rev. Greville Chester.

In the present state of our knowledge any inquiry into the origin of this use of glass weights in Egypt would be premature. The manufacture of objects in glass was, of course, common among the ancient Egyptians, and the art was never neglected in later times. And, although specially characteristic of the period of Mohammadan rule in Egypt, glass weights of the Roman and Byzantine ages are not uncommon. The British Museum possesses nearly eighty of these older weights, which were undoubtedly manufactured in Egypt, where they were found, for the most part by the Rev. Greville Chester. The Byzantine glass weights conform fairly closely to the standard of the solidus of 68 grs., which was the origin of the Mohammadan deenár of 66 grs. The figures run, approximately, 64, 65·7, 67·4, 67·7, 68·3, 69, 70·4; 32, 32·5, 33·4, 34, 34·4, 34·5, 34·9; 17·2, 17, 17·7, 18,—representing the solidus, half, and quarter, and very nearly the deenár, half, and quarter. The device on these weights is generally a bust or head, and some have inscriptions recording the name of the ruler of the province. That these are the direct ancestors of the Arabic glass weights is beyond question.

The older, Roman, glass discs present types obviously Egyptian—such as the figure of Harpocrates, Bes, Serapis, Isis, the ibis, the ram. Their weight, however, is not uniform like the Byzantine. Older still is the one Phoenician glass disc in the British Museum, bearing the words עבר מר ('Abd Mar) in Phoenician round a bull's head, and weighing 11·8 grs. These various specimens carry the history of glass weights considerably further back than Mohammadan times. The Arabs found

Byzantine glass weights already in use in Egypt when they conquered it, and these were doubtless derived from earlier Roman discs, and from the glass scarabs of the Ptolemaic period.*

The inscriptions on glass weights are generally brief; for the reason that the letters are necessarily coarse; since great fineness in the lines is difficult in a material run into a mould. The formula *بِسْمِ اللّٰهِ*, *In God's name*, sometimes begins the inscription, and the words *امر به* (Such a one) *ordered*, or *Of what* (such a one) *ordered*, frequently precede the name of the governor or khaleefeh. In the time of the Fátímees, *مما عمل*, *of what was made*, is substituted. Instead of the verb *ضرب*, *strike*, *طبع*, *stamp* or *impress*, is used, in the phrase *امر بطبعه* (Such a one) *ordered the stamping of it* and the like. If a lower official, such as a sub-governor or inspector of markets, is indicated as well as the chief governor, his name is prefixed with the words *على يدى*, *by the hands* (of so-and-so). The object of the disc, as a mean of testing the weight of coins, is indicated by the word *مثقال* *weight*, prefixed to the denomination which it is intended to test; as *مثقال دينار*, *weight of a deenár*. In a few instances *وزن*, which has the same meaning, is substituted for *مثقال*, and rarely *كيل*, *measure*; whilst such forms as *طبع بموزين*, *stamped by weights*, and *امر بميزن* (Such a one) *ordered for weighing* (such a coin) occur: the alif of prolongation in such words as *ميزان*, *موازين*, *دينار*, being usually omitted.

The accuracy of the weight is attested by the word *واف*, *full* (weight); or, rarely, by *ملة*, *كامل* or *كامل*, and *صح*, which have equivalent meanings; or, especially under the Fátímee Khaleefehs, by *عدل*, *just* (weight).

* See the notes of Mr. W. Flinders Petrie in the *Archaeological Journal*, vol. xl., p. 419, 1883.

The denominations of coins and weights indicated on the glass standards are,—

ثلث *third* (of a deenár).

ثلثين *two thirds* (of a deenár).

خزوبة *kharroobeh*. The plur. خزوبات also occurs.

درهم *dirhem*.

دينار, دينار, *deenár*.

رطل *pound*. رطل كبير *great pound*. رطلين *two pounds*.

سدس *sixth* (of an ounce).

فلس *fels*. فلس الكبير *great fels*.

قيراط *keerát*. The plur. قيراط also occurs.

نصف *half* (of a dirhem, deenár, pound, fels, and ounce).

وقية *ounce*.

The names of the rulers under whose authority the weight was issued are chiefly (1) those of governors of Egypt under the Amawee and 'Abbásee Khaleefehs, with the style (if any) of *Ameer*, and rarely with the name of the contemporary Khaleefeh; (2) a few with the names and styles of the 'Abbásee Khaleefehs, without those of subordinate princes or governors; (3) those of the Fátímee Khaleefehs, whose titles are precisely the same as those occurring on their coins; and (4) those issued during the Memlook government of Egypt, and bearing names not identified hitherto with any of the known rulers or officers of the period. Such names are 'Alee Esh-Shuweykh ("the little Sheykh"), 'Alee El-Misree ("the Egyptian"), 'Alee Ed-Da'ee ("the emissary"), Moḥammad El-'Oodee ("the lutist"), Moḥammad El-Bábá, Aḥmad, 'Omar El-Faḳeeh ("the jurist"), 'Omar, Ḥasan, Ya'ḳoob, El-Jemálee, Aboo-Bekr, Faraj, &c. These persons were apparently private individuals, and their weights may have been stamped for their own shops. In some cases, however, they appear to have manufactured them themselves, for the phrases عمل عمر, 'Omar made it, عمل

عمل برسر المسعودى احمد * , عمل فرج , حسن clearly indicate personal manufacture. It is noteworthy that, with the exception of the Khaleefehs, no Egyptian sovereigns' names appear on glass weights, neither of the Bencee-Tooloon, the Ikhsheedees, the Ayyoobees, or the Memlooks. No obvious explanation of this circumstance suggests itself. It can hardly be assumed that all the glass weights issued by these dynasties have disappeared, and the only conclusion to arrive at is that they were not issued by them; but why they should not have been issued, and why glass weights appear in so sporadic a manner, are questions to which at present no answer seems to be forthcoming.

Benedictory phrases in connexion with the names of princes and governors are rare on glass weights. Those that occur are *امتع الله به* and *امتع الله له*, *God preserve him*; *اعزه الله*, *God honour him*; *اكرمه الله*, *God exalt him*. Other religious phrases are *يثق بالله* (Such a one) *trusts in God*; *حسبى الله*, *God suffices me*; *ربى الله*, *God is my Lord*; *امر الله بالوفى*, *God ordains honesty* (or just dealing); *كيل الله*, *God's measure*; *نعم الرفيق التوفيق*, *How excellent a companion is the grace of God*; *استجرت بالله تعالى*, *I seek the protection of God the most High*; *لله*, *To God*; *العزة لله*, *To God* (belongeth) *power*; *الله احد*, *God is One*; *انصر الله*, *God grant victory*. Some of the discs bearing simply a formula such as the last may be in the nature of charms or medals. The 'Alawee *kelimah*, with *على ولى الله*, occurs on some Fátimée weights.

The colour of each glass weight is stated in the Catalogue, but it is impossible to describe the great variety of tints, ranging from deep purple or blue to pale yellow, which are exhibited. Some examples have a

* This can hardly refer to Sultán Faraj, the Memlook.

metallic lustre, some are gilded, some have striae of a different colour from the ground tint; and while the great majority are transparent or translucent, some are opaque. The commonest colour is bottle green.

Closely allied to glass weights are the curious glass stamps, indicating measures of capacity, of which a few are described at the end of this volume. They are known as *Bottle Stamps*, because they were impressed upon glass measures of bottle form. Very few of them have come down to us. The five in the British Museum are evidently Egyptian, for they are precisely similar to the glass weights of the same period, and three of them bear the names of Egyptian governors of whom we also possess glass weights,—namely, 'Obeyd-Allah ibn El-Ḥabḥáb and 'Eesá ibn Abee-'Aṭá.

The first in order bears the name of 'Abd-El-Melik ibn Marwán, who may be either the Amawee Khaleefeh, A.H. 65—86, or the governor of Egypt of the same name (A.H. 132). In form of inscription this stamp exactly tallies with the early glass weights; but instead of an indication of some denomination of coin, or weight, it bears the words *نصف قسط* *half a kist*. The *kist*, which is simply the Greek *ξέστης*, the Latin *sextarius*, a well known liquid measure of antiquity, was used by the Arabs as a measure for oil, wine, honey, and the like, and contained 18 (Arab) oz. of oil, or 20 of wine, or 27 of honey, by weight, according to Mar Eliyá the Archbishop of Naṣeebeen (*J. R. A. S.* ix., 291 ff. The various estimates of this measure may be referred to in Sauvaire, *Matériaux*, pt. iii., pp. 99, 198.)

The second stamp was issued by 'Obeyd-Allah ibn El-Ḥabḥáb, treasurer of Egypt at the beginning of the second century of the Flight (see the glass weights nos. 3, 3 G.), and bears also the name of a subordinate official, Haleem (?) ibn Meysarah and the date 111 A.H.: it indicates a quarter of a *kist*, or about half a pint measure.

Rogers, who described this stamp in the *Journal of the Royal Asiatic Society* (x. p. 99, 1878), observed that "the inscription and the marginal rim were produced from two different moulds," and believed "that the former was first impressed, and that, before the glass had time to cool, the mould of the latter was pressed over it," with the effect of partially obliterating some of the letters.

The third and fourth bottle-stamps bear the name of 'Eesá ibn Abee-'Aṭá, who also issued the glass weight no. 6, and indicate the measure of half a *kist*; while the fifth was made by a certain Hoseyn ibn 'Alee, unknown, and gives no indication of measure.

Rogers has also described (*J. R. A. S.*, *ibid.* pp. 100 and 111) four other bottle-stamps, not in the British Museum. One belonged to Lord Talbot de Malahide, and bears the inscription,—

امر حيان بن	Ordered Ḥayyán ibn
شريح ربع	Shureyḥ : quarter
قسط . . و	<i>kist</i> . . . F.
اف	ull measure.

Rogers was unable to identify the name, which is that of the same governor of Egypt (A.H. 99—101) who issued no. 1 of the series of glass weights in the Museum collection. Another has the name of the *Káid* 'Obeyd-Alláh, but the measure it represents is doubtful, and Rogers gives no engraving by which to correct his uncertain reading of the inscription :—

بسم الله امر القائد | عبید الله | مكيلة شفر | فه واف

A third stamp, belonging to the Rogers' collection, is inscribed,—

بسم الله	In God's name
امر الامير	ordered the Ameer
(?) محمد بن بشر	Mohammad ibn Bishr (?)
نصف قسط	Half <i>kist</i>
واف	Full measure.

And a fourth, belonging to Yakub Pasha Artin, reads,—

مما امر	<i>Of those ordered</i>
به عبید الله	<i>by 'Obeyd Allah</i>
بن الحباب	<i>ibn El-Ḥabḥáb.</i>
قسط وا	<i>kist. Full</i>
ف	<i>measure.</i>

The Department of Mediæval Antiquities possesses a series of copper stamps analogous to the glass bottle-stamps, but these do not come within the scope of the present Catalogue. Several of them bear the names of the 'Abbásee Khaleefehs El-Mo'temid, El-Mo'tadid, and El-Muktedir, ranging from A.H. 256 to A.H. 320 (A.D. 870—932), together with the names of the Bencee Abee-Dulaf of Karaj, Iṣfahán, &c.; viz., 'Abd-el-'Azeez, Dulaf, Aḥmad, and 'Omar, all ruling between 240 and 290 A.H.

In conclusion, I have specially to thank Mr. Herbert Grueber for much useful assistance, and Monsieur Sauvaire for some valuable notes on the Egyptian governors.

**I.—GOVERNORS UNDER THE
AMAWEE AND 'ABBÁSEE
KHALEEFES.**

↳

NOTE.

WHEN the nature of the Arabic inscriptions is sufficiently indicated by the name, etc., set forth in the heading, no detailed translation is given, in accordance with the system adopted in the *Catalogue of Oriental Coins*; but in the case of the inscriptions on the glass weights of the early Governors, where some metrological data, interesting to others besides Arabic scholars, are found, literal translations are added. Most of the weights are stamped on only one side: in this case the words *obv.* and *rev.* are omitted. The colour of the glass is given approximately, as the shades are too numerous to be individualized, and the attempt to distinguish them would rarely convey the same impression to two minds. They are always understood to be transparent except when stated to be opaque. The inscriptions are generally in a circular depression; when otherwise the form of the depression is stated. G. C. indicates that the specimen belongs to the Glass Collection in the Department of Mediaeval Antiquities, and not to the Department of Coins.

1.—GOVERNORS UNDER THE AMAWEE KHALEEFES.

\* The metrology of the Memlook period is so variable that it has not been considered desirable to hazard any identifications of the intended weights. At the same time it may be noted that there is a general average of weights of 93, 47, and 23 grs., which appear to represent double dirhems, dirhems and half dirhems.

VIII.—BOTTLE-STAMPS.

GLASS BOTTLE-STAMPS.*

'ABD-EL-MELIK IBN MARWÁN.

HALF-KIST.

391.

بِسْمِ اللّٰهِ
[ا]مْرُ اللّٰهِ بِالْو
فَا وَاْمْرًا
عَبْدِ الْمَلِكِ بْنِ مَرْوَانَ
نَ بِطَبْعِهِ نِصْفَ
قِسْطٍ وَ
اِف

*In God's name :
God commands honesty ; And ordered the Ameer 'Abd-El-Melik ibn M[arwán] the stamping of it, half a kist. Full measure.*

Pl. IX. G. C. Green, 1·7

* Of other specimens in the Glass Collection, one is stamped with the numeral ۲ (2); another with ح; and a third bears the representation of a figure seated cross-legged, wearing a turban, and holding a bottle in his right hand and a wine-cup in his left, enclosed in a circle of dots. A hollow glass cylinder, closed at ends, weighs 4900 grs., and may be meant for a pound (rafl) weight; a glass ring weighs 3000 grs.; and a square block with hole in centre 1460 grs.

'OBEYD-ALLAH IBN EL-ḤABḤĀB.*

Treasurer of Egypt, A.H. 102—114 = A.D. 720—732.

(UNDER WHOM IBN MEYSARAH.)

QUARTER-KIST.

392.

Year 111.

بِسْمِ اللَّهِ
 أَمْرُ عَبْدِ اللَّهِ
 بْنِ الْحَبَّابِ رُبْعَ
 قِسْطٍ عَلَى يَدَيْ حَلِ
 مِ بْنِ مَيْسَرَةَ سَنَةِ
 [أ]حْدَى عَشْرَةَ
 مِئَةً

In God's name :
Ordered 'Obeyd-Allah
ibn El-Ḥabḥāb a quarter
kist, by the hands of . .
. ibn Meysarah, year
one ten
hundred.

Pl. IX. G. C. Green, 1·75

'EESA IBN ABEE-'AṬĀ.†

Treasurer of Egypt, A.H. 125—132 = A.D. 743—750.

HALF . . . KEYLEH?

393.

بِسْمِ اللَّهِ
 أَمْرُ اللَّهِ بِالْوَفَا
 [أ]مْرُ الْأَمِيرِ عَيْسَى
 بْنِ [أ]بِي عَطَا نِصْفَ
 . . كَيْلَةَ وَافٍ

In God's name :
God commands honesty :
ordered the Ameer 'Eesá
ibn Abee-'Aṭá half
. . Keyleh. Full measure.

Pl. IX. G. C. Green, 1·4

* See above, p. 4, nos. 3, 3G, and Introduction.

† See above, p. 6, no. 6.

HALF-KIST.

394.

ا[مر الامير
ع[سي بن ابى عط]ا
ب[طبعه نصف
ق[سط واف

Ordered the Ameer
'Eesá ibn Abee-Atá
the stamping of half
a kist : full measure.
